#### Theme of Session:

The main aim of this special session is to explore possibilities of cloud computing, Fog Computing and Edge computing. As only traditional cloud-based infrastructures are not enough for the current demands of Internet of Things (IoT) applications. Two major issues are the limitations in terms of latency and network bandwidth. In recent years, the concepts of fog computing and edge computing were proposed to alleviate these limitations by moving data processing capabilities closer to the network edge. Considering IoT growth and development forecasts, we believe the full potential of IoT can, in many cases, only be unlocked by combining cloud, fog and edge computing.

#### Topics of Interest:

We invite original (un-published) research contributions based on the above-mentioned theme including following topics **but not limited to**:

- Cloud Computing
- Fog Computing
- Edge Computing
- Cloud, Fog and Edge Computing in Health care
- Cloud, Fog and Edge Computing in Education
- Cloud, Fog and Edge Computing in IoT
